Recyclability

Evaluate your compatibility of plastic packaging with the entire waste management chain, including collection, sorting, recycling, and ability of the recycled material to be reused in original application.

RecyClass developed several types of recyclability assessments for plastic packaging, answering the needs of the entire plastic value chain:

Valid for 3 years!

- ▶ **Design for Recycling Certification** classifies qualitatively from A to F the technical recyclability of final plastic packaging for packaging producers and their Europe-wide B2B communication.
- ▶ **Recyclability Rate Certification** rates the effective recyclability of final plastic packaging in a specific geographical area for brand owner.
- ▶ **Letter of Compatibility** evaluates qualitatively the recyclability of semi-finished packaging and is mainly destined to converters and their Europe-wide B2B communication.
